RESEARCH INTERESTS

Question Answering (QA) System

- Recently, I am working on learning sentence representation for natural language processing (NLP) tasks, including QA—published in ACL 2020, NAACL 2021.
- We present a graph neural network-based model that can detect supporting sentences for machine-reading question answering—published in LREC 2020.
- We propose a hierarchical model for understanding lengthy text for QA. In addition, we develop a latent clustering method that analyses and uses topic information in the target dataset as additional information—published in NAALC 2018, CIKM 2019.

Natural Language Processing and Multimodal Information

- We develop multimodal representation-based metrics that compute semantic alignment of image and description—published in ACL 2021.
- We show that usage of multimodal information using deep neural network-based model significantly improve the performance for speech emotion recognition task—published in IEEE SLT 2018, ICASSP 2019, ICASSP 2020, Interspeech 2020.

Natural Language Processing for Social Good

- We are trying to develop an algorithm that can be proactively used to prevent text-related problems in our society. Our first effort begin with developing a model that can detect the abusive language on Twitter—published in EMNLP workshop 2018. We further present research that can detect misleading news headlines—published in AACL 2019, Disinformation, Misinformation, and Fake News in Social Media-Emerging Research Challenges and Opportunities, Springer 2020, IEEE Access 2021.
